### CONCRETE WALL PANELS – Page 1

These photos show some of the many stable complexes we have built showing different roof styles and using both full height concrete external walls or lower concrete wall panels with Colorbond CRI upper external walls or other type of upper external walls. We can also construct the same building styles in **colorbond**, **timber**, **Weathertex** or other building materials. The external concrete panels can either be left natural, painted, rendered, or have other feature finishes like a stone veneer. The colour scheme can either match or be contrasting. If you have a different style in mind, we can build it.
